A congenial soil is one that is deep, well pulverized, through which water circulates in every direction freely and uniformly, in which there is a good amount of organic matter undergoing decomposition, and in which there are always present the plantfood constituents necessary for the development of the plant. In addition to the natural conditions of the soil, favorable to plant growth, there are changes which must be made by plowing, harrowing, cultivating, drainage, and other means, all of which aid in making the soil a congenial home for the plant. The farmer must know what natural and artificial conditions the soil must possess, and he must see that these conditions are present. No plant will find the soil a congenial home if there is not an abundant supply of plant-food in the proper form demanded by the plant and...
